Server Error in Application "DEFAULT WEB SITE"

Internet Information Services 7.0

Error Summary

HTTP Error 503.2 - Service Unavailable

The serverRuntime@appConcurrentRequestLimit setting is being exceeded.

Detailed Error Information

Module	**IIS Web Core**	Requested URL	**http://www.trainenquiry.com:80/**
Notification	**BeginRequest**	Physical Path	**C:\inetpub\wwwroot\cris2345**
Handler	**StaticFile**	Logon Method	**Not yet determined**
Error Code	**0x00000000**	Logon User	**Not yet determined**
		Failed Request Tracing Log Directory	**C:\inetpub\logs\FailedReqLogFiles**

Most likely causes:

- Setting is too low.
- The application is taking too long for the current load.

Things you can try:

- Try increasing the value of the setting.
- Check that external resources (for example, disk, database, etc..) are performing at expected levels.
- Check that the application has not deadlocked.

Links and More Information

IIS will not allow more concurrent requests to an application than the serverRuntime@appConcurrentRequestLimit setting permits.
